

Overview

This document provides links for quick access to the InfoImage documentation library. The InfoImage library contains PDF files, Help files, and the Release documentation. Open any document or Help file from this document by clicking on the appropriate hypertext link.

You'll find a cross-document index feature for the PDF files in the Documentation/Books directory. This feature enables you to search for words or phrases across all PDF files in the Books directory.

Note: The Release Notes and Release Announcement PDFs are not included in the Acrobat text search feature.

Organization

This document provides several ways to access documents.

- Alphabetically – by PDF or Help file.
- By InfoImage product component classification.

For example: Client Work Manager is an InfoImage Component and its classification is Client.

Each document listed under the classification topics provides a brief description of the purpose of the document.

Use the bookmark pane on the left of this page to access documents by component classification or alphabetically.

Tip: If the bookmarks pane doesn't appear, click the  icon on the Acrobat Reader toolbar. The bookmarks will appear in the pane and you can then click on the topic you want to view.

PDF Files Listed Alphabetically

- ▶ CAL OLE Automation Interface Guide
- ▶ CAL.Net Wrapper User Guide
- ▶ CAS Manager User Guide
- ▶ Client API Reference Guide
- ▶ Client Work Manager Interface Integration Guide
- ▶ Client Work Manager User Guide
- ▶ CMIS Class Generator Installation Guide
- ▶ CMIS Class Generation Tool User Guide
- ▶ CMIS SoapUI Web Services Test Tool User Guide

Component Listing

Installation

Installation and Configuration Guide

Provides instructions and supporting information for installing and configuring the InfoImage software.

InfoImage Configurator Help

Provides instructions and supporting information to configure Workflow Domain Subsystems, Workflow Domain Controllers, Storage Manager, and the Reconciliation Utility

Registry Reference Guide

Provides a reference for the initialization and configuration settings stored in the Windows registry for all the various software components of an InfoImage system.

General

Technical Overview Guide

Provides a high-level overview of InfoImage system processes and components. This document serves as the gateway to the InfoImage documentation library.

System Internals Guide

Provides information about the concepts, architecture, and internal operations of the InfoImage system.

Troubleshooting Guide

Identifies some of the most common problems encountered when operating the InfoImage system.

Utilities Guide

Provides the information needed to use the utilities available for the administration of the InfoImage system.

Clients

Client Work Manager Integration Guide

Discusses the interfaces that enable you to customize Client Work Manager to handle the specific requirements of the application.

Client Work Manager Help

Provides conceptual and procedural information for using Client Work Manager to automate your workflow processes.

Form Viewer Help

Provides instructions on using the Form Viewer window, both for indexing workitems and performing File Cabinet queries.

Document Viewer Help

Provides conceptual and procedural information for using the Document Viewer to view image pages and notes, add or change pages and to create markups.

Administration

Enterprise Licensing Help

Provides setup and administration information required for administering the number of client and server licenses in use according to your licensing agreements.

Workflow Designer User's Guide

Provides instructions and supporting information for creating workflows using Workflow Designer to design routes used in your InfoImage environment.

Workflow Designer Help

Provides instructions and supporting information for creating workflow routes using Workflow Designer. The help file explains basic workflow concepts and provides procedures for building, viewing, and testing routes, including the definition of worksteps, processing rules, and variables.

Forms Creator Help

Provides instructions on using the Forms Creator application to create all of the forms used in the InfoImage system.

Form Viewer Help

Provides instructions on using the Form Viewer window for indexing workitems and for performing File Cabinet queries.

Robot Manager Help

Provides conceptual and procedural information on using the InfoImage Robot Manager to configure and manage the "robot" programs that may be running as part of an InfoImage system.

InfoImage Configurator Help

Provides conceptual and procedural information for using InfoImage Configurator to configure multiple Workflow Domains on the same server.

Input/Output

Scan Manager Help

Provides conceptual, procedural and administration information for using the main Scanning component of Scan Manager to scan batches of documents and then perform the tasks required to send the batches to workflow or another output destination. The Batch Viewer Help covers the tasks associated with the Batch Viewer component of Scan Manager.

Scan Manager – Batch Viewer Help

Provides conceptual, procedural and administration information for using the Batch Viewer component of Scan Manager to complete the tasks necessary to send batches of documents to workflow or another output destination.

Rapid Batch Entry Integration Reference Guide

Provides reference information and instructions for installing and administering Rapid Batch Entry and the Document Generator.

Storage

Storage Manager Help

Provides instructions and supporting information for using Storage Manager to archive workitems to magnetic disk or to third-party hierarchical storage management systems. This help file explains basic file storage concepts and provides procedures for configuring, operating, and maintaining Storage Manager software.

Storage Manager – Catalog Check Help

Provides instructions for using CatalogCheck, a Storage Manager utility used to detect and correct discrepancies between the Catalog's Locator table and the data stored on the magnetic archive volumes. The help illustrates and explains the CatalogCheck interface and the CatalogCheck Report. The help also provides procedures for verifying records against the Catalog.

Storage Manager – VolAdmin Help

Provides instructions for using VolAdmin, a Storage Manager utility used to maintain the Locator_Volume table in the Catalog. The help illustrates and explains the VolAdmin interface and the VolAdmin Report. The help also provides procedures for adding, updating, and deleting archive volumes on the Catalog.

Web & Viewer Access

-  [View Server Development Kit Reference Guide](#)
Provides information about using the View Server Development Kit to create customized workstation applications that require view-only capability.
-  [View Server User Implementation Guide](#)
Provides instructions and supporting information to set up the View Server software.
-  [Internet Web Access Kit Reference Guide](#)
Provides administration and reference information for the Web Access Kit.
-  [User Change Password API Reference Guide](#)
Provides instructions on using the User Change Password Web Service to create custom clients. Sample windows and web applications are provided with the CAC Server installer.

Integration

Client API Reference Guide

Provides reference information to design and write programs using the Client API.

CAL OLE Automation Interface Guide

Provides reference information to design and write programs using the CAL OLE Automation Interface.

CAL ActiveX Workflow Control Help

Provides reference information for using the events, methods and properties for the following ActiveX workflow controls:

- FormField
- HostScreen
- Session
- Worklist
- Workset
- WorksetContents

Client Work Manager Integration Guide

Discusses the interfaces that enable you to customize Client Work Manager to handle the specific needs of the application.

Remote Request Reference Guide

Provides the technical details necessary to write a program that uses the Remote Request command set.

CAL .Net Wrapper Help

Provides reference information to design custom programs in a .Net environment, using the CAL .Net Wrapper Interface, which will interoperate with InfoImage.
